Human Zirconium Technology

100% PRETTAU[®] ZIRCONIA - MADE BY CAD/CAM

“Zirconia needs heroes” Enrico Steger

Prettau® Zirconia

The upper restoration was cemented onto 8 abutments with internal hex connection but without wedging the teeth 16-17 and 26-27 against the bridge at the front, so that the cementing was easier and better dental hygiene was ensured.

Then, work was done on the lower restoration which was screwed onto 8 implants with internal hex fitting and cemented onto titan bases to provide the restoration framework in the mouth with suitable passivity.

Based on our many years of experience, we can confidently say that certain restoration projects offer a higher probability of success to the dentist, to the patient and - why not - to us dental lab technicians if they are made of Prettau® Zirconia. Although this technique certainly requires greater planning and more careful transferral of registrations, it also enables us to obtain remarkable functionality without compromising aesthetics.
